

Wingu Academy to offer high school Caps curriculum from 2022

Wingu Academy, home-schooling education provider of the internationally recognised British curriculum, has announced the expansion of its high school offering to include the South African Caps curriculum from January 2022.

The Wingu Academy platform gives educational support to home-schoolers all over Africa between the ages of 5 – 19 years. Live classes and tutorials are presented along with interactive online content. The platform aims to enrich learners with 4th industrial revolution (4IR) skills such as critical thinking, creativity, complex problem solving and online collaboration. Housed at TuksNovation (University of Pretoria's High Tech Business Accelerator), it has been developed by teachers, UP alumni, and postgraduate students who are experts in their respective fields with additional collaboration with researchers from the Wits School of Education.

Wingu Academy focusses on a blended learning approach that includes asynchronous (self-paced, student-led) and synchronous (interactive live classes) learning, enriched with animations, video content, infographics, gamification and simulations to cater for the major types of learning styles (visual, auditory, reading/writing, kinaesthetic learning styles) and implementing constructive feedback in continuous assessments providing a wide variety of choices to support individual learning at home. The learners are exposed to computation thinking from as early as Grade 1, and the coding and robotics courses culminate into industry relevant software development certificates for the high school learners, increasing their employability and readiness for the Future of Work.

WinguNet – satellite internet service

The academy is also proud to announce the launch of WinguNet. "The launch of WinguNet has been much anticipated and serves to address the need of stable, high-speed internet in areas where there is poor or no coverage," says Ian Strydom, Wingu Academy managing director.

The introduction of WinguNet to the range of services delivered by Wingu Academy further indicates how in tune they are with the needs of parents and students. “This will be introduced to the existing parents and students first on the platform who struggle with connectivity, thereafter being rolled out with the mission of connecting and educating students in difficult-to-reach, isolated areas. This satellite initiative is the first of its kind – just another way that Wingu stays true to their principles of advancing education and enabling excellence,” Strydom concludes.

Enrolments are now open for the January 2022 intake to Wingu Academy, however space is limited to ensure an ideal student-to-teacher ratio.
